

An Automatic List-Numbering Macro  
WordPerfect Magazine  
Tips

I often type numbered lists, so I created the included LISTNUM.WPM to speed up the process. I run the macro, type the information I need, then press the right bracket (]), which inserts the next number on the list, followed by an indent.

Run the macro by pressing Macro (Alt-F10), typing "listnum" and pressing (Enter). Now you're ready to type the text. When you need to add the next number on the list, press the right bracket key (]).

*Note: When you're finished typing your list, press Cancel (F1) to stop the macro or it will continue to run, even if you exit your document.*
